

Operator Interface Hand-held Model HG1P

Lightweight and robust For optimal usability

IDEC CORPORATION

Functional and user-friendly New solution from IDEC

1 Lightweight and compact, weighs only 500g

Lightweight hand-held structure enables stress-free operation even when the worker needs to move around. * Not including cable.

2 Robust design

Designed to withstand a drop test from a predictable height during hand-held operation or storage. Prevents damage even when dropped accidentally.

* Not resistant to excessive shock.

3 Ergonomic d

Ergonomic design ideal for long and fatigue-free operation

Designed to fit comfortably in the hand by its ergonomic design.

5

Wall mount bracket available when the HG1P is not used

4 Starts up in only 1.5 seconds!

Reduces wait time at start-up.

6 Low power consumption, only 3W!

The size of the power source can be reduced, achieving a more compact system.

7

Clear and high resolution 4.3 inch display

Equipped with a high resolution 4.3 inch TFT color LCD touch panel. Clear and informative display enables intuitive operation.

9 Easy maintenance with a USB memory

Project data can be saved on a USB memory inserted in the device. No need to use a PC as data inside the HG1P can be updated via USB. Also, teaching parameter data can be saved on USB memory and imported.

11

Flexible software enables easy designing of the screen

The easy-to-use work space enables the structure of the project to be easily understood and configuration of operating settings simple, allowing a comfortable working environment.

⁸ Multilingual

Several languages can be selected and changed easily with a button.

10 Removable cable

If damaged, the connection cable can easily be detached and repaired. Saves downtime and cost.

Programming Software WindO/I-NV4 Included in Automation Organizer

Solves on-site problems

Case 1

High resolution and clear display makes robot teaching simple

Before

Only experts with know-how can understand an operating screen full of text

Screens showing indirect values make it difficult to imagine the actual movement and memorize values. Even skilled operators have to refer to manuals during operation.

User-friendly screens enable standardization of operations

The high resolution 4.3 inch display achieves an impressive operating screen. Machine operating experience is not required, reducing time required to train staff and enabling quick start-up of a manufacturing site. Also, the operating screen can be easily designed using programming software.

Case 2

Flexible installation. A single touch panel can be used in various locations

Before Several touch panels are located in different places on the line

Although touch panels are needed to operate control panels, some are not used frequently.

Saves cost and space

Touch panels do not need to be always installed as cables can be detached from the hand-held operator interface and can be connected with external devices when necessary. Lightweight 500g makes the operator interface easy to carry around. Saves cost and helps downsize control panels.

Case 3

Labor-saving operation on large machines Before Several operators are needed for start-up operation On large equipment, several operators had to check with each other to confirm processing work. Image equipment of the several operators o

Portable design helps reduce manpower

The hand-held operator interface is light-weight, and easy to carry around, enabling process work to be checked visually. The ergonomic design reduces fatigue caused by long working hours. Also, the drop resistance is 1.5m, so there is no need to worry about the hand-held operator interface slipping from the hands.

Case 4

Safety ensured during maintenance

Before Maintenance using PCs may lead to human error

When checking a PLC setting on a PC, knowledge of ladder software is required to determine the changes needed. Also, parameters that do not require changes might be adjusted, leading to failure. Furthermore, the worker may have to work in an uncomfortable position for long hours.

Display only the required data on customized screens

By showing only required data, safe and efficient maintenance is achieved. Data can be saved on a USB memory, making it easy for troubleshooting and maintenance.

Easily readable and functional. Designed for optimal usability.

Chara Magni	cter fication	0.5, 1 to 8 vertically and horizontally (except for scalable fonts)		
Character Attribute		Blink (1 or 0.5 sec period), reverse, bold, shadowed		
Graphics		Straight line, polyline, rectangle, arc, pie,circle/ ellipse, equilateral polygons (3, 4, 5, 6, 8), picture, fill		
Window Display		3 popup screens + 1 system screen		
Switching Element		Analog resistive membrane		
ch P;	Operating Force	3N maximum		
Touch	Mechanical Life	1,000,000 operations		
Buzzer		Single tone (sound length adjustable)		
User M	emory Capacity	12 MB approx. (including extension font)		

• Also see operating instructions on the back page.

*1) The backlight life is not guaranteed and refers to the time until the brightness reduces by half after use at 25°C. The actual life depends on operating environments and conditions.

*2) Brightness of the LCD only at 25°C.

Mechanical Specifications

Emergency Stop Switch

Part No.	AB6E-3BV02PRM	
Quantity	1	
Contact Configuration	2NC (External wiring)	
Contact Rating	30V DC, 1A (resistive load / inductive load)	
Durability	Electrical: 100,000 operations minimum Mechanical: 100,000 operations minimum	
Reset	Pull or turn reset	

Enabling Switch

Part No.	HE6B-M200Y
Quantity	1
Contact Configuration	2C (External wiring)
Contact Rating 30V DC, 1A (resistive load) 30V DC, 0.7A (inductive load)	
Monitor Contact	N/A
Durability	Mechanical: Position $1 \rightarrow 2 \rightarrow 1$ 1000,000 operations minimum $1 \rightarrow 2 \rightarrow 3 \rightarrow 1$ 100,000 operations minimumElectrical Life: 100,000 operations minimum

Selector Switch

Part No.	LB6S-2T1
Quantity	1
Contact Configuration	SPDT (external wiring)
Contact Rating	30V DC, 0.1A (resistive Load)
LED	Non-illuminated
Durability	Electrical: 250,000 operations minimum Mechanical: 100,000 operations minimum
Angle	90° 2-position
Operation	Maintained (manual)

Function key

Method	Tactile switch
Quantity	12
Contact Configuration	NO contact (internal wiring)

External Interface

Removable 19-pin connector (socket): CA-19P1N126Y00 (Phoneix Contact)

Connector pin layout diagram

Interface Specifications HG1P-ST32YBFH-B0

Serial Interface (COM)	RS422/485	Electrical Characteristics	EIA RS422/485 compliant
		Transmission Speed	187,500/115,200/57,600/ 38,400/19,200/9,600/ 4,800/2,400/1,200 bps (*1)
		Transmission Distance	20m max.
		Synchronization	Asynchronous
USB Interface	Interface		USB 2.0 (device)
(USB1)	Connector		USB Type Mini-B connector
USB Interface	Interface		USB 2.0 (host)
(USB2) (*2)	Connector		USB Type A connector

 The above specification applies only when a optional cable specified for HG1P is used.

*1) 187,500 bps is available only with SIEMENS SIMATIC S7-300/400 series (MPI port direct connection).

*2) USB memory only

HG1P-ST32ZBFH-B0

Ethernet Interface	Interface	IEEE802.3i, IEEE802.3u compliant
(LAN)	Communication Speed	10Mbps, 10/100Mbps(*2)
USB Interface	Interface	USB 2.0 (device)
(USB1)	Connector	USB Type Mini-B connector
USB Interface	Interface	USB 2.0 (host)
(USB2) (*1)	Connector	USB Type A connector

The above specification applies only when a optional cable specified for HG1P is used.

*1) USB memory only

*2) When selecting the communication speed of the Ethernet interface of 10/100 Mbps and using HG1P as the EMC Standard Approved Products, ferrite cores need to be attached to the optional cable.

Connecter Pin Arrangement

No.	Name	Function
1	C_NC1	Selector switch contact 1 (NC)
2	C_N01	Selector switch contact 1 (NO)
3	B_C1	Enabling switch contact 1 (COM)
4	B_C2	Enabling switch contact 2 (COM)
5	B_N02	Enabling switch contact 2 (NO)
6	FG	Frame ground
7	RDA+/TPI+	Receive data (+)
8	RDB-/TPI-	Receive data (–)
9	SDB-/TPO-	Send data (-)
10	A_NC21	Emergency stop switch contact 2 (NC)
11	A_NC22	Emergency stop switch contact 2 (NC)
12	DC24V-	Power supply 24V DC (-)
13	C_C1	Selector switch contact 1 (COM)
14	B_N01	Enabling switch contact 1 (NO)
15	SG	Communication signal ground
16	SDA+/TPO+	Send data (+)
17	A_NC11	Emergency stop switch contact 1 (NC)
18	A_NC12	Emergency stop switch contact 1 (NC)
19	DC24V+	Power supply 24V DC (+)

Option Cable Connector Terminal Arrangement

No.	Name	Function	Conductor color
1	FG	Frame ground	Brown
2	RDB-/TPI-	Receive data ()	Orange
3	RDA+/TPI+	Receive data (+)	Orange (White)
4	SDB-/TPO-	Send data (–)	Green
5	SDA+/TP0+	Send data (+)	Green (White)
6	SG	Communication signal ground	Gray (White)
7	NC	—	—
8	NC	—	—
9	B_N01	Enabling switch contact 1 (NO)	Pink (White)
10	B_C1	Enabling switch contact 1 (COM)	Pink
11	A_NC11	Emergency stop switch contact 1 (NC)	Yellow
12	A_NC12	Emergency stop switch contact 1 (NC)	Yellow (White)
13	DC24V-	Power supply 24V DC (–)	Black
14	NC	—	—
15	NC	—	—
16	NC	—	—
17	NC	—	—
18	C_NC1	Selector switch contact 1 (NC)	Light blue (White)
19	C_N01	Selector switch contact 1 (NO)	Light blue
20	C_C1	Selector switch contact 1 (COM)	Gray
21	B_N02	Enabling switch contact 2 (NO)	Blue (White)
22	B_C2	Enabling switch contact 2 (COM)	Blue
23	A_NC21	Emergency stop switch contact 2 (NC)	Purple
24	A_NC22	Emergency stop switch contact 2 (NC)	Purple (White)
25	DC24V+	Power supply 24V DC (+)	Red

Accessories (optional)

Name	Part No. (Ordering No.)	Description	
Application Software	SW1A-W1C	Automation Organizer (includes WindO/I NV4)	
User's Manual (English)	HG9Y-B1701	Includes digital manual	
Hand Strap	HG9Z-PS4	Strap for wrists.	
Wall Mount Bracket	HG9Z-PK3	Install on the back of the pendant to enable wall mount	
USB Maintenance Cable	HG9Z-XCM42	Length: 2m Communication method: USB Connector (main unit side): USB-miniB Connector (external device connection side): USB type A	
Debug Cable (*1)	HG9Z-PX12	Length: 2m Connector (main unit side): CA-19S1N128007S (Phoenix Contact) Connector (external device connection side): loose wire	

*1) Use the Debug Cable only for debugging.

• The compatible PLC information is for reference only (except for IDEC PLCs), and IDEC does not guarantee the operation of any other manufacturers' PLC. When using other manufacturers' PLCs, read their specifications and instruction manual carefully. The PLC must be operated correctly under the user's responsibility.

 The company names and product names are registered trademarks or brand names.

*1) HG series can be connected as a master to the slave/server device. *2) HG series is connected as a slave to the master/client device.

An updated listing of compatible PLCs can be found at the following website. http://www.idec.com/oi/drivers

Operating Instructions

Be sure to read this manual carefully before performing installation, wiring, or maintenance work.

- When using the HG1P in applications which require high level of safety, add a fail-safe or backup functionality, and verify an adequate level of safety using the product specifications.
- Turn off the power to the HG1P before installation, removal, wiring, maintenance, and inspection of the HG1P. Failure to turn power off may cause electrical shock or fire hazard.
- Special expertise is required to install, wire, configure, and operate the HG1P. Users without such expertise must not use the HG1P.
- An emergency circuit suitable for a system must be configured outside of the HG1P by using the emergency stop switch mounted on the HG1P unit.
- Do not use touch switches, the function keys and the function switches for an emergency circuit or an interlocking circuit. If the HG1P fails, equipment connected to the HG1P will no longer be protected, and serious injury to operators and equipment damage may be caused.
- Be sure to build the system to ensure safety in an event of a loss of communication between HG1P and connected device.
- Connect the emergency stop switch and the enabling switch on the HG1P to function as either a category 0 or category 1 stop with EN60204-1.
- Do not under any circumstances, hold the enabling switch on the HG1P in position 2 with tape, string, or deform the rubber cover. The intrinsic function of the enabling switch will be lost, and the enabling switch may not work in an emergency.
- When using the HG1P, place your finger firmly on the enabling switch.
- Perform regular checks to confirm that the emergency stop switch and enabling switch work properly. It is extremely dangerous if a foreign object gets stuck in between causing the enabling switch to remain in position 2 even when the hands are released.
- Stop using the HG1P if it is accidentally dropped or exposed to significant shocks, check the HG1P for damage, and confirm that its various functions work safely and correctly.
- Connect the FG wire to grounding resistance of 100 Ω or less. Otherwise there is a risk of electric shock or mistaken operation.
- When more than one button is pressed at the same time, due to the detection characteristics of an analog type touch panel, only the center of the pressed area is sensed and the unit assumes that only one button is pressed. Do not operate the HG1P by pressing more than one button simultaneously because there is a risk of accident.
- The screen will not be visible if the backlight burns out, but the touch panel and the function key will remain functional. In this case, stop using the HG1P as damage may occur if a touch panel or function key is operated mistakenly with the backlight burned out.

- The HG1P is designed for indoor use only (Not for outdoor use)
- Use HG1P optional cable for wiring. The D-sub connector on the end of the HG1P optional cable is not water- or dust-proof. If protection against water or dust is required, the user must replace the D-sub connector with water-proof characteristics.
- Use the product within the environmental limits given in the catalog and manual. Use of the product in high temperature or high-humidity environments, or in locations where it is exposed to condensation, corrosive gas or large shock may cause electrical shock, fire, or malfunction.
- The HG1P is designed for use in pollution degree 2. Use the HG1P in pollution degree 2 environment. (according to IEC60664-1)
- Prevent metal fragments or wire chips from dropping inside the HG1P housing. Ingress of such fragments and chips may cause fire hazard, damage, or malfunction.
- Use a power supply of the rated value. Using a wrong power supply or wiring in reverse polarity may cause fire hazard or damage.
- Make sure of safety before starting and stopping the HG1P. Incorrect operation of the HG1P may cause mechanical damage or accidents.
- Use the HG1P in a local area network if you download, upload or monitor the project data via the Ethernet port.
- The touch panel of the HG1P is made of glass, and will break if exposed to excessive shock. Be sure to handle with care.
- Do not push or scratch the touch panel and protection sheet with a hard object such as a tool, because they can be easily damaged.
- When used under temperatures over the rated operating temperature, the clock accuracy is affected. Adjust the clock before use or regularly.
- Do not install the HG1P in areas subjected to strong ultraviolet rays, since ultraviolet rays may impair the quality of the LCD.
- Do not attempt to disassemble, repair or modify the HG1P. This can create the risk of fire or electrical shock.
- Do not switch off the power or pull out the USB flash drive while it is being accessed, as this may result in destruction of the stored data. If the data on the USB flash drive is corrupted, reformat the USB flash drive.
- Install the HG1P according to the instructions. Improper installation may result in, failure, electrical shock, fire hazard, or malfunction of the HG1P.
- If the HG1P is used in a way incompatible with the its original purpose, the function of the HG1P may be impaired.
- Note that small black and bright dots may show up on LCD Screen: this is not a failure or malfunction.
