# Control

## Simple I/O Control

## Audio Output Sound file (30 sec max.)

Audio error messages can be sent to an operator, providing faster system recovery. Audio output can also be used as a voice guidance system.

## Ethernet Remote data maintenance

Project data can be downloaded and uploaded remotely via Ethernet. One User can check and operate screens using a PC or smartphone in a remote location.

## O/Link IDEC high-speed 115.2 kbps O/Link communication

A maximum of 16 HGs can be connected to a PLC using RS485 (2-wire), easily creating a high-speed network reducing cost.

## I/O Module Display and I/O control in one package

A maximum of four MicroSmart expansion modules can be connected, allowing equipment control using a small number of I/O points. (Input, output, I/O modules can be used.)

\* HG4G/3G can connect up to 4, HG2G (high performance model only) can connect up to 2 expansion modules.  
\* For compatible expansion modules, see "Expansion Modules" on page 23.

## Cyclic Script Cyclic I/O control

Cyclic script enables parallel processing of I/O control. Real time I/O processing for high performance.

3-sec startup

High Speed CPU

Fast start-up

High-speed 400 MHz CPU and unique software technology shorten startup time. Fast start-up allows for easy debugging.

High Speed Data

Fast USB2.0 communication

USB 2.0, high-speed 480 Mbps. Project data can be downloaded and uploaded easily using a PC and USB flash drive.

Easy Maintenance

Simple operation

SD Card

Convenient SD card slot

Data can be saved or transferred by using an SD card (32 GB max.) By saving user data on an SD card, user memory can be reduced.

USB Flash Drive

USB flash drive enables easy data transfer.

Inserting a USB flash drive into the HG will automatically bring up the USB transfer menu. Operator can work on errors without the use of a PC.

Front Panel Maintenance

Easy data maintenance, without opening the control cabinet.

Using a USB panel-mount cable, data can be transferred without opening the panel. The pass-through function enables debugging of ladder programs in the PLC, connected to the HG, inside the cabinet. \*See the users's manual for compatible PLCs.

Application Example

# OI Touchscreen Programming Software

Flexible and easy to use workspace. Easy programming enables efficiency.

## Dynamic and flexible screen designs

The ribbon organizes commands in groups and tabs, making it possible to find commands easily and quickly.

## Graphic library with extensive collection of images

7000 graphic images can be selected from the library tool. Graphics that are used frequently as part images can be quickly selected from the parts list.

## Easy-to-view work space

Project structure can be listed for easy viewing, and switched to the editing screen in one click.

## Design screens using the object list

Device, operating conditions, and type of command can be read from the object list. During debugging, data stored in the device is shown in popups, and perating conditions can be distinguished via color.

## Easy programming

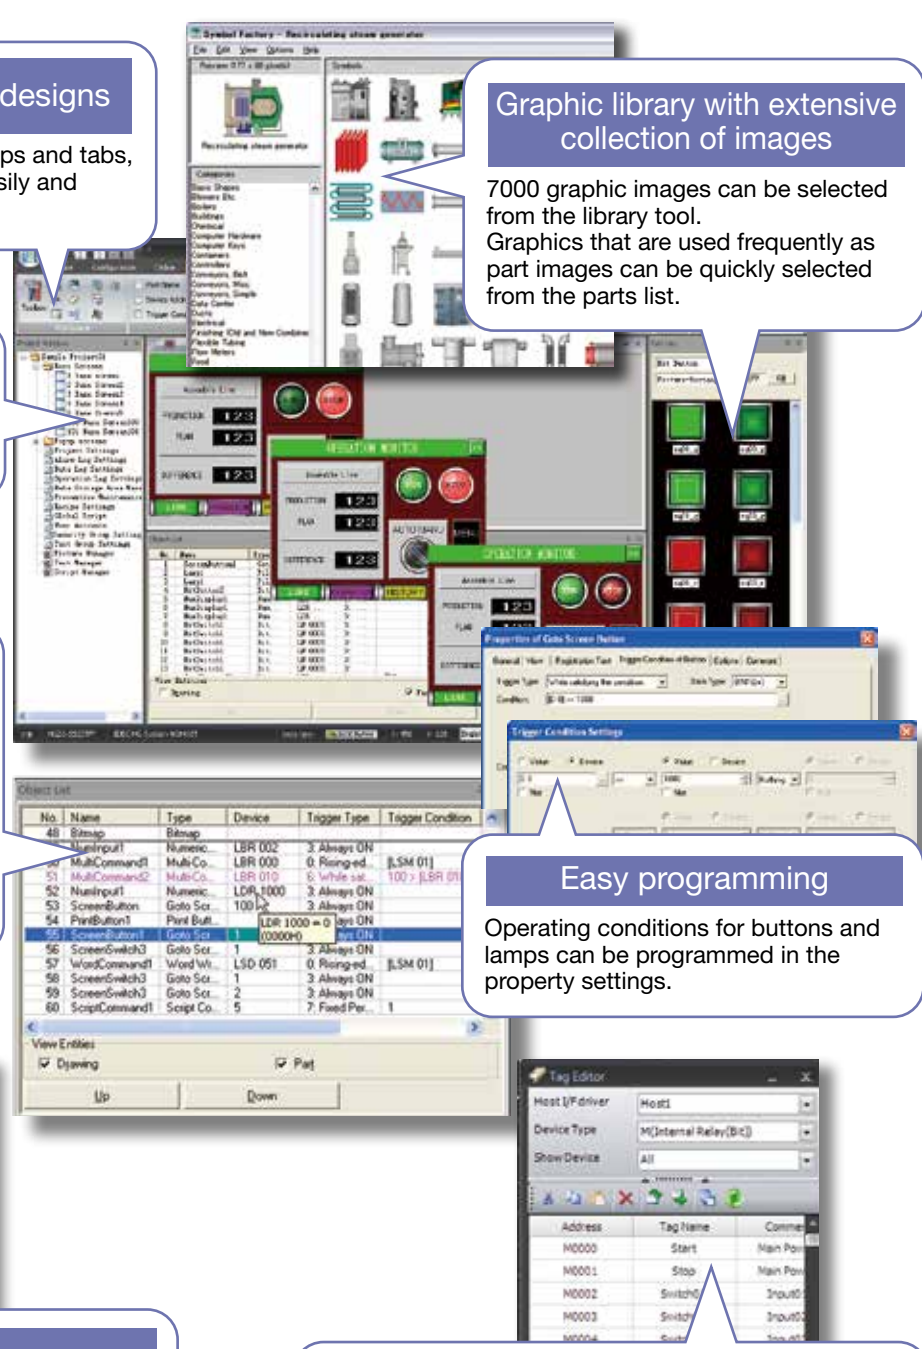

Operating conditions for buttons and lamps can be programmed in the property settings.

## Create language screens easily

Switch to any of the supported languages by using the text manager within the same project. Translation is easy as Unicode format files can be imported/exported.

## Tag editor shows available devices at a glance

Device addresses used in the project can be easily identified by using the tag editor and cross-references.

# Multimedia

## Multimedia Functions

### Records and plays back high quality images

Multimedia models with video and audio input terminals. The screen records images on an SD card through a connected video camera and images recorded on an SD card can be played back on the screen or PC.

\* HG4G-CJT22MF, HG3G-AJT22MF, HG3G-8JTMF models only.

#### Display

Displays images on the screen from the camera.

#### Save Image

Records and plays back images on the screen from the camera and saves the data on the SD card.

#### Video Play

Replays video images and audio from an SD card.

MPEG4 video files can be played back on the screen. Work procedures can be shown on the screen, and when trouble occurs, it can be used as a video manual for troubleshooting on-site.

#### Video Recording

Records video images of an error

When an alarm is set off, video images before and after the start of the alarm can be recorded on an SD card. This enables on-site analysis of the trouble. Smooth and refined images can be recorded.
